373: Kolbeinn Hugi / Dart Frog Empathy Map Meditation (2021)

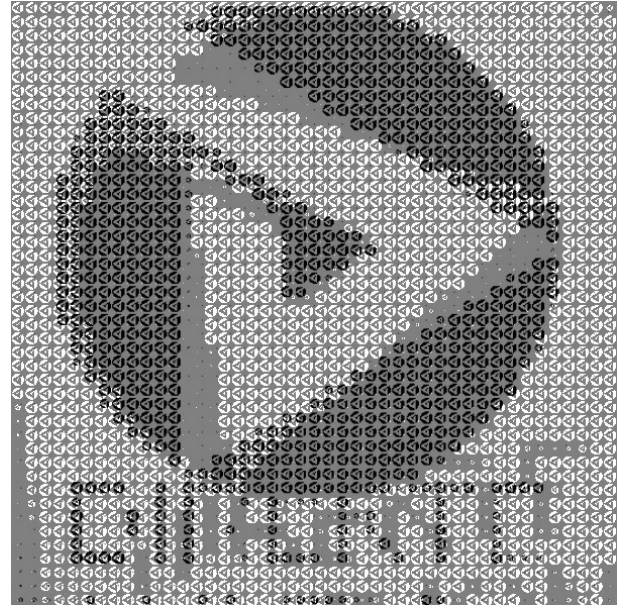

From the Research Project Animal Internet:

Entering the mind of an individual of another species is the ultimate exercise in empathy.

Accessing the mind of others through the Animal Internet is done via the VRging sensory protocol.

VRging gives access to various sensations, emotions and abilities outside of the biological restrictions of the user.

The host can give the user different levels of access, ranging from seeing what the host is seeing into giving the user full control over the hosts body, thoughts and consciousness.
